LATIN AMERICA AND THE CARIBBEAN

DNS Week
The DNS Week agenda is now available. This four-day week of events on the DNS and ccTLD management will take place in San Juan, Puerto Rico, from August 20 to 23. The DNS Week is an initiative organized by LACTLD and .PR Top Level Domain with the support from ICANN, Afilias, PIR, LACNIC, Internet Society and CTU.

LACTLD article

“The Development of the LACNIC Community. A History Under Construction”

LACNIC has recently published the book that captures its history of creation and development along with the most outstanding milestones of the last 20 years of the regional Internet. The document was produced by Carolina Aguerre and was supported by ICANN, Internet Society and LACTLD.

LACIGF 12
Registration to participate in the LACIGF12 is now open. The Latin American and Caribbean Internet Governance Forum will be held from August 6 to 8 in La Paz, Bolivia. The preliminary agenda of the event is available here.
Report and conclusions of the public consultation on the LACIGF review

The final report is now available in Spanish, English and Portuguese. The open LACIGF review process —carried out by Raúl Echeberría— sought to identify consensus and options for updating and evolving regional Internet Governance mechanisms. The open conversation about the conclusions and suggestions included in the report will continue during the LACIGF 12.

GFCE Triple-I: Creating a more Trusted Internet experience

GFCE Triple-I is bringing its capacity building workshop to La Paz, Bolivia, within the framework of the LACIGF 12. On Monday 5 August 2019, GFCE Triple-I will host “the Internet Infrastructure Security Day” along with LACNIC, LACTLD, ISOC, ISOC Bolivia and ICANN. The initiative seeks to raise awareness and inspire joint action to increase the level of trust in use of the Internet infrastructure in the LAC region.

GLOBAL

DNS and the Internet of Things: Opportunities, Risks, and Challenges

The ICANN SSAC has recently published SAC105, a report on the interplay between the DNS and the IoT. The paper asks some provocative questions, frames the risks that the IoT presents to the DNS ecosystem, and strives to remove much of the confusion around the topic.

Recalibrating the DoH Debate, by
Stacie Hoffmann

A protocol recently released by the IETF, DNS over HTTPS (DoH), is at the centre of an increasingly polarised debate. This is because DoH uses encryption in the name of security and privacy and re-locates DNS resolution to the application layer of the Internet.

Domains & Jurisdiction Program Operational Approaches

The Secretariat of the Internet & Jurisdiction Policy Network has released the Operational Approaches documents for each of its three policy Programs: Data & Jurisdiction, Content & Jurisdiction, and Domains & Jurisdiction. They contain concrete proposals that intend to provide a common frame of reference for public and private decision-makers in their efforts to develop policy standards and cooperation frameworks.

Internet Society: 2018 Cyber Incident & Breach Trends Report

The Internet Society’s Online Trust Alliance (OTA) has released its 11th Cyber Incident & Breach Trends report, which provides an overview of cyber incidents and offers steps organizations can take to prevent and mitigate the potential damage. This year’s Report includes ransomware, business email compromise (BEC), distributed denial-of-service (DDoS) attacks, connected device vulnerability, and more.
